Date: 14/9/26 CHAT CLIENT – SERVER USING TCP SOCKETS

AIM:

To implement a simple chat client-server application using TCP sockets

ALGORITHM:

SERVER:

1. Create a TCP socket
2. Bind and listen for a client
3. Accept the connection
4. Receive a message from the client
5. Send a reply to the client
6. close the connection.

CLIENT:

1. Create a TCP socket
2. Connect to the server
3. Send a message
4. Receive the server's reply
5. Display the reply
6. Close the connection.

CODE – SERVER

```
import socket
S= socket.socket()
s.bind ("localhost", 5006)
s.listen(1)
c,addr.= s.accept()
while True:
    msg=c.recv(1024).decode()
    if msg=="bye": break
    print ("client", msg)
    c.send(input("server":).encode()
c.close()
s.close()
```

CODE – CLIENT

```
import socket
s= socket.socket()
s=connect(("localhost", 5000))
while True:
    msg =input("client:")
    s.send(msg.encode())
    if msg=="bye": break
    print("server", s.recv
          (1024).decode())
s.close()
```

Result:

Thus the chat client server was successfully implemented using the TCP Socket

Input :-

Client : Hello

Server : Hi

Output :-

Client : Hello

Server : Hi
